

## Driver Vehicle Inspection Report Auditing

According to RAIR's analysis of nearly 70,000 motor carriers, 65% of CSA violations fall under the Vehicle Maintenance BASIC. Many of these violations, and the associated CSA points, can be avoided if drivers perform thorough pre-trip and post-trip inspections. Inaccurate or incomplete DVIRs can also result in delays, additional costs, and exposure to financial risks like litigation and fines.

RAIR helps motor carriers identify drivers who "pencil whip" their DVIRs instead of performing careful inspections. Our automated system audits **paper DVIRs** for: 1) the identification of defects or a notation that no defects were found, 2) the driver's signature and 3) a notation that repairs either were made or were unnecessary.

We use electronic data to create viewable and printable DVIR images that are customized to meet the needs of each carrier. Our system audits **electronic DVIR data** for the presence of defects/no defects, driver IDs, vehicle IDs, dates, and comments.

We also compare DVIRs with roadside inspections to determine whether problems were identified on the day of, or the day prior to, an inspection.

Carriers can update documents after repairs have been made and track licenses, registrations, permits, insurance documents, inspections, and maintenance records.

# Vehicle File Management

RAIR helps motor carriers maintain paperless vehicle files that are current, accurate, and complete. We also offer automated alerts to help carriers keep their files up-to-date.

1. Reports are built according to each client's corporate hierarchy, allowing users to drill down from the corporate level to regional, terminal, and fleet manager levels
2. Search for a vehicle by VIN or license
3. Customizable tabs for the vehicle files
4. Color-coded document status
5. Click on page icon or document type to view an image of the document
6. Print documents or download with Excel
